MAGNETAR ALL OUT introduces a new seed treatment formulation. Improvement in seedling development early in the season improves germination and performance.

Testing has shown improved seedling development in the early stages. Germination tests of wheat and pea seeds showed an increase in shoot length of 82% and 73% increase on seeds treated with MAGNETAR ALL OUT over untreated seeds. Similarly an increase in root length of 60% in wheat and 48% in peas treated with MAGNETAR ALL OUT over untreated. All Out is seed safe with no negative effects on germination while ensuring proper plant stand and uniform emergence. MAGNETAR ALL OUT helps provide producers with improved plant stand early in the season.

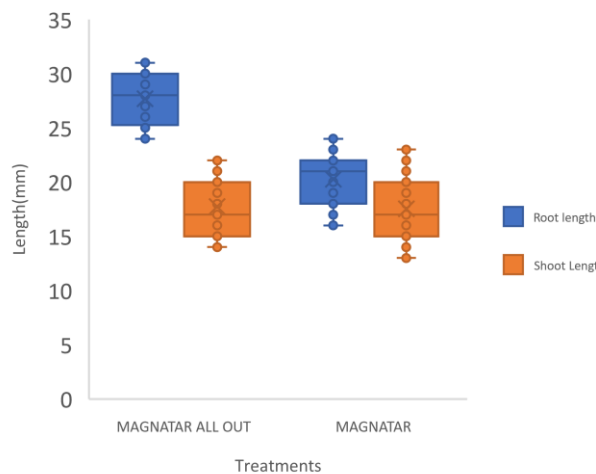

New improved formulation for 2019

New MAGNETAR ALL OUT shows improved performance from the original MAGNETAR seed treatment. The improved formulation gives an added advantage to producers with healthier plants and improved seedling vigour. MAGNETAR ALL OUT provided a 37% increase in wheat roots over the original MAGNETAR seed treatment. Additionally there is an increase of 11% in root length and 33% in shoot length in peas with the MAGNETAR ALL OUT formulation. The new MAGNETAR ALL OUT formulation includes essential nutrients available to the seed early after emergence to enhance the development of the seedling.
